Excel PivotTable Basics

Sample Superstore Sales Analysis

GitHub Repository Name: `Excel-PivotTable-Basics`
Tool: Microsoft Excel
Dataset: Sample Superstore

Objective

Create PivotTables for sales analysis by category, region, and month using the Sample Superstore dataset.

Workbook

The complete project is available in:

`Excel-PivotTable-Basics.xlsx`

Workbook Sheets

- **Read Me** — Project details, dataset information, and instructions
- **Superstore_Data** — Raw Sample Superstore sales data with 10,800 records
- **Pivot_Category** — Sales, profit, quantity, orders, and discount summary by category
- **Pivot_Region** — Sales, profit, quantity, orders, and discount summary by region
- **Pivot_Month** — Monthly sales, profit, quantity, and order summary
- **Insights** — Short business insights based on the summaries

Deliverables

- Three PivotTable-style summaries
- Sales analysis by category
- Sales analysis by region
- Sales analysis by month
- Charts for the summary tables
- Short business insights

Key Metrics

The workbook summarizes the following metrics:

- Sales
- Profit
- Quantity
- Number of orders
- Average discount
- Monthly performance
- Inventory and category-level performance observations

Dataset Source

The workbook uses the public Sample Superstore dataset from:

https://github.com/leonism/sample-superstore

How to Use

1. Download and open `Excel-PivotTable-Basics.xlsx` in Microsoft Excel.
2. Review the `Superstore_Data` sheet for the source records.
3. Open each `Pivot_` sheet to review the grouped summaries.
4. Use the charts to compare performance visually.
5. Read the `Insights` sheet for the main business findings.

Concepts Practiced

- Excel PivotTables
- Data summarization
- Grouping by category, region, and month
- Sales and profit analysis
- Business reporting
- Chart-based data visualization
